

Check SDWan when We get a Firewall Conserve Mode Alert

Log into Firewall

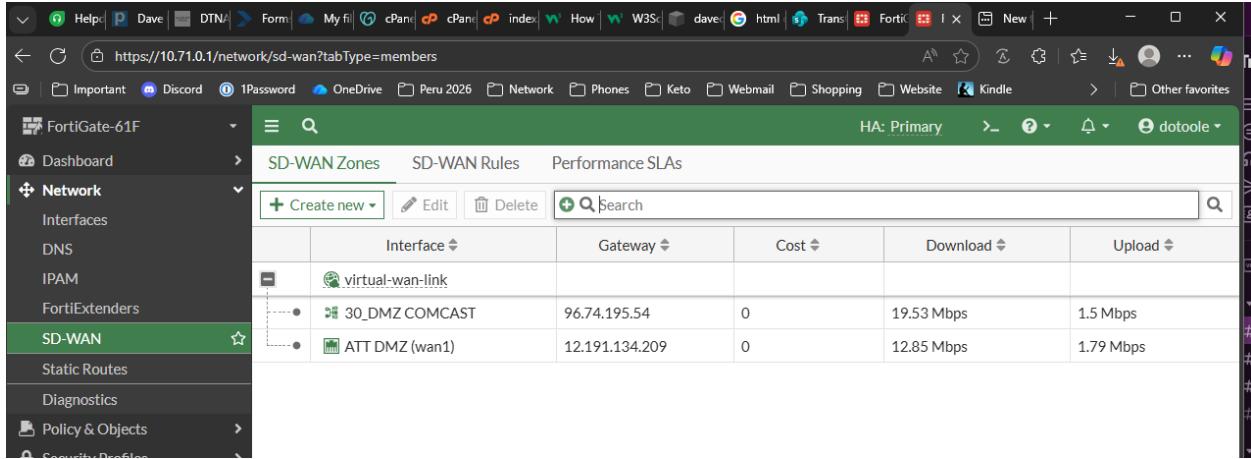

There are TWO Firewalls. You will log into the ACTIVE one (whichever it is)

If you see it down.

Gary: [FortiGate](#)

Elmhurst: [FortiGate](#)

Antioch: [FortiGate](#)

The screenshot shows the FortiGate SD-WAN configuration page. The left sidebar is collapsed, and the main content area is titled 'SD-WAN'. It displays a table of WAN links:

	Interface	Gateway	Cost	Download	Upload
virtual-wan-link					
30_DMZ COMCAST	96.74.195.54	0	19.53 Mbps	1.5 Mbps	
ATT DMZ (wan1)	12.191.134.209	0	12.85 Mbps	1.79 Mbps	

Usually you can reboot it and the other one will automatically take over
